

Attention Valued Customer,

CD Playback – It is recommended that only one song be played or cued from a single audio CD at a time. Playing two songs from the same CD could cause audio drop-outs to occur. Playing two CDs from separate drives is not a problem.

To ensure reliable operation, your DDS DRIVE hard drive caddy must be in the locked position. 2 keys have been provided with your unit for this purpose.

Contained within your DDS80 Hard Drive is useful content. When you plug the DDS Drive into your computer you will find the following items.

- 1) **Full User Manual** – Please read this as many valuable features are explained here.
- 2) **Librarian Software program** – For the best performance it is highly recommend that you process each of your hard drives and iPods with this program before connecting to the DDS.
- 3) **Sample Music** – we have included a selection of music and a prebuilt library to get you going quickly.

The DDS80 benefits from continuous feature updates. For the newest features and latest updates, be sure to visit www.numark.com and download the latest DDS firmware and Librarian software files.

Enjoy,

The NUMARK Development Team

Just as a reminder, ALWAYS eject all drives or power down properly.
