## DJ|iO MAC DRIVER v2.0.0 RELEASE NOTES

Please note that this is a beta release. This version of DJ|iO drivers adds Mac OS X 10.6 Snow Leopard compatibility.

### BETA RELEASE NOTES:

1. DJ|iO will be selectable as an input device in your software. DJ|iO's Mic input is a hardware pass-through to the outputs and is not sent to your computer, so this input will not function.
2. Some programs may crash when started if DJ|iO is the default system output device. To work around this, set up another device as your system's default output device.
