

NEW! NOW WITH CUE LE VERSION 5!

DMC2

PROFESSIONAL RACK-MOUNT DJ SOFTWARE CONTROLLER

TAKE YOUR PERFORMANCE TO THE DIGITAL AGE. The new DMC2 is Numark's flagship professional DJ software controller, featuring a rugged metal frame that can be used in a 3U rack-mount setting or as a tabletop unit.

The DMC2 has a form factor based on CD players such as the CDN95 and CDN35, allowing mobile DJs comfortable with rack consoles to quickly and easily add the power and versatility of software-based mixing to their arsenal. No assignment of software parameters for the DMC2 is necessary – simply connect the controller to a laptop with a USB cable, and use your hands to control your favorite DJ application

The DMC2 gives you the technical options you need to maximize your mixes. DMC2 features include true instant-start, audio/video scratching capability with CUE LE 5 (Full-screen video output possible with CUE 5 Full Version software), one-button song synchronization, automix for quick mixes, a wide range of looping and cueing options, fader buttons that allow automatic crossfading, Key-lock function and more.
