

## DEMO MODE

Welcome to iDJ2. This iDJ2 contains the latest operating system, v1.12, with Demo Mode. This special feature will introduce you to using iDJ2. It automatically begins after two minutes if you do not touch the controls. Once you are done with Demo Mode, we recommend that you deactivate it to avoid unintentionally activating it during a gig.

To deactivate Demo Mode, follow these steps:

1. Press **UTILITY**
2. Press **>** at the bottom-right corner of the screen
3. Press **Demo** under the screen
4. Rotate the Push Select knob counter clockwise to change the setting for Start Demonstration to Never

To return to Demo Mode later, you can follow these same steps, selecting an option other than Never for the Start Demonstration setting.
