EASY PRO AUDIO FOR EVERY DJ: NUMARK UNVEILS THE DJ|iO 2 USB AUDIO INTERFACE

*DJ|iO 2 offers affordable studio-grade 24-bit/44.1 kHz audio quality,
ultra-clean setup, and easy recording.*

Cumberland, R.I. (January 23, 2014) – Numark’s original DJ|iO audio interface offered DJs a simple and affordable way to get up and running with any DJ controller that lacked a built-in audio interface. At NAMM 2014, Numark will be showing DJ|iO 2, an updated and enhanced version of DJ|iO, which will be even more affordable and includes the ability to send the mix and mic signals into a computer for recording.

“In addition to its new routing capabilities, we’ve also made DJ|iO 2 much more compact,” said Chris Roman, Numark Product Manager. “Both in size and price, it’s now easier than ever to fit it into your setup.”

DJ|iO 2 is class-compliant, USB-powered, and includes a ¼-inch headphone output with volume control, RCA master outputs, ¼-inch microphone input, and ultra-low-latency signal path designed for real-time mixing. Numark will unveil DJ|iO 2 in Hall A, Booth 6700 at the 2014 NAMM Show, January 23-26 in Anaheim, California.
